DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-27 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 and 26-27 rejected under 35 U.S.C. 102(b) as being anticipated by Tissier et al. (U.S. patent # 5,677,832).

Tissier et al. disclose the claimed invention a power distribution system (figures 3-7), including an AC power source (figure 3, item 17), a capacitor bank (figure 3, item C), an active (figure 3, item 15), an inverter 21, and the current sensor (figure 3, item 22), a fundamental frequency (column 3, line 30-65), harmonic current injection (column 5, line 20-65).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 14-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Tissier et al. (U.S. Patent # 5,677,832) in combination with Schauder (U.S. Patent # 5,329,221).

Tissier et al. disclose the claimed invention as explained in the claims 1-5 and 26-27, above, except the utilization of the technique for a dc link capacitor coupled across the inverter and utilization of vector representation of the voltage and current to measure inverter current. Schauder teaches the utilization of similar technique for a dc link capacitor coupled across the inverter figure 1, item 55 and utilization of vector representation of the voltage and current to measure inverter current (figure 1, item 50). It would have been obvious one having an ordinary skill in the art at the time the invention was made to modify Tissier et al.'s power supply by the technique taught by Schauder for the purpose of increasing the efficiency of the power supply.

Allowable Subject Matter

5. Claims 6-13 and 20-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
